

How to recreate POXRFFLE from INPROFLE in PROMPT Business System, Purchasing and Inventory Control

This procedure recreates the product cross-reference file used for purchasing from the inventory master file. Be sure you know what you are doing before using this procedure!

1. Go to the PROMPT Database Management System, Option PD on the PROMPT Business System Master Menu
2. Select option FC
3. Input File SDNAME (INPROFLE) Output File SDNAME (POXRFFLE)
Press tab after entering INPROFLE and after entering POXRFFLE
4. Enter the data as follows
1 (2) (2) (2) Press tab after entering each field number
2 (36) (36) (3)
3 (3) (3) (4)
4 (39) (39) (5)
5 (7) (7) (6)
6 (11) (11) (7)
7 (85) (85) (20)
8 (55) (55) (29)

Check carefully, then Press enter and you should get % completion until it shows 100%. Then press F7 to end program.

5. Select Option FP
6. 1. Data File SDNAME(POXRFFLE) press tab
2. Conditional Field Number.. (29) press tab
3. Conditional Operator.....(=) press tab
4. Conditional Value.....(0) This is the number zero

Press enter, and you will get % completion until it shows 100%

7. Change the zero in 4. Conditional Value.....(0) to a (1) and run it again. To do this tab to the zero, change it to a one and press enter. This time when you get 100% press F7 to end the program.
8. Selection option FS
9. 1. Data File SDNAME (POXRFFLE) press tab
2. Field number(8) press tab
3. Starting Value(1) Press enter
It will run until 100% and say sequencing complete
10. Change the (8) in 2. Field number to a (9) and run it again
11. Change the (9) in 2. Field Number to (28) and change the (1) in Starting Value to (N) and run it again.
12. Change the (28) in 2. Field number to (21) and change the (1) in Starting value to (10/21/00) or use the date the date you run it if after 10/21/00. In other words, enter the date you are running the job.
13. When you get 100% , press F7 and you are finished.

14. Go to IC 5, 19 and you will see the new data.
